

Bachelor of Arts in Modern Languages (Chinese)

About This Program

The Bachelor of Arts degree in Modern Languages (Chinese) with a concentration in Localization and Translation combines language, culture, and technology to prepare students for work in the language services industry. Localization translates and adapts language, texts, products, software, and websites to a target culture. Students work with an international software partner to build machine translation (MT) engines and test their engines against international translation products. Students learn in a collaborative work environment with hands-on training in computer-assisted translation, focusing on concepts of "big language data" collection and processing, as well as MT engine tuning across multiple languages and domains. Students also build AI models using these same language data for natural language understanding. The substantive program provides training in key skills for future employment tasks, for ultimate career preparedness.

Competencies

1. Upon graduation, students will demonstrate integrative thinking about translation theory and practice as applied to the localization field.
2. Upon graduation, students will successfully conduct cultural analyses of localized products and services.
3. Upon graduation, students will gain skills with tools commonly used in the language services industry, with a focus on emerging AI/ML approaches and large language models.
4. Upon graduation, students will demonstrate preparation for careers in the localization industry.

Admissions Criteria

In addition to satisfying the entrance requirements for the College of Liberal Arts, prospective majors in the Department of Modern Languages must meet the following criteria:

- A 3.0 GPA is required in the 1441-2314 Modern Language sequence, or an equivalent score on the Modern Language testing instrument, or approval of the departmental advisor.
- After admission to the Modern Language major, students must maintain a 2.00 GPA in major classes.
