Certificate in Telehealth and Health Informatics

About this Program

This 9-hour Telehealth and Health Informatics Certificate will prepare upper division undergraduate students from any related discipline to have fundamental skills needed for telehealth and health informatics. Telehealth is the distribution of health-related services via electronic and telecommunication technology. Health Informatics is the storage and use of health care information to foster better collaboration among various health-related providers.

competencies

1. Upon completion, students will demonstrate effective use of technologies and information systems to support safe processes of care and evaluate impact on quality and safety.\\n\\n
2. Upon completion, students communicate effectively with other health professionals to manage and coordinate care.
3. Upon completion, students will use information and communication technologies to gather data, inform decisions, and improve outcomes.
4. Upon completion, students will demonstrate the use of technologies to support communication, clinical decision-making, error prevention, and care coordination.
